SUMMARY

Informatics student at Universitas Multimedia Nusantara graduating in 2026, with hands on experience building backend services, mobile apps, and full stack products in real teams. I care about understanding systems deeply, not just making them work, and I bring that same curiosity to everything I build.

EXPERIENCE

PT Infosys Solusi Terpadu - Jakarta, Indonesia

Junior Backend Developer Intern (January 2025 - January 2026)

- Reimplemented the core registration service and developed a new Shared Wallet feature for HiBank, a mobile banking app with 100,000+ active users, as part of a 27 person engineering team.
- Resolved 15+ production bugs across multiple backend services.
- Maintained code quality through unit testing, achieving 90%+ coverage on critical service modules.

Himpunan Mahasiswa Informatika (HMIF) - Universitas Multimedia Nusantara, Indonesia

Research and Development Member (January 2024 - January 2025)

- Served as Project Manager for the CSS (Computer Science Shelter) website, a mandatory onboarding platform used by all incoming Informatics students (*August 2024 - September 2024*)
- Contributed as a frontend developer for the PPIF (Informatics Program Introduction) website, the official orientation platform for all new Informatics students (*September 2023 - August 2024*)

PROJECT

School Scheduling App - Universitas Multimedia Nusantara, Indonesia

Thesis Project (January 2026 - *current*)

- Building a Flutter app to solve manual school scheduling by automating timetable generation using a Genetic Algorithm hybrid Simulated Annealing, with a Go Gin backend handling the algorithm.
- Designed role based access so admins, teachers, parents, and students each see only what's relevant to them.

Kaligrafi raudlatul irfan - Universitas Multimedia Nusantara, Indonesia

Full Stack Developer & Project Manager (August 2023 - November 2024)

- Led a 7 person team to build an e commerce platform that helps an Islamic calligraphy community sell and showcase their handcrafted artwork online.
- Contributed as full stack developer (Next.js + Express.js) and handled deployment infrastructure using Docker Compose.

Snapo - Universitas Multimedia Nusantara, Indonesia

Frontend Developer (January 2023 - June 2023)

- Built an interactive museum gallery website to make Jakarta's cultural heritage more engaging and accessible for general audiences.
- Developed 3D animations, scroll triggered effects, and responsive layouts using React.js and Tailwind CSS.

EDUCATION

UNIVERSITAS MULTIMEDIA NUSANTARA (2022 - 2026)

Bachelor of Informatics - GPA 3.79

SMA MATER DEI PAMULANG (2019 - 2022)

Science

SKILLS

Thinking in systems and concepts, not just syntax. Building systems that are clean and easy to maintain. Picking up new technologies quickly and understanding them deeply before applying them. Working across the full stack, from backend logic to mobile interfaces. Configuring and managing development infrastructure from scratch.
